Experiment 9:

Experiment 9:-

Aim:- To create a Snapshot of a Vm and test it by loading the previous version / cloned VM.

Requirements:- Vmware workstation.

Procedures:-

① install vmware workstation

② choose to create a new virtual machine

③ configure the setting as an previous version

④ Then, choose the snapshot options in the status bar.

⑤ The snapshot of the virtual machine of cloned system will be taken.

⑥ The snapshot is directly send to Both guest os and master os.

Result:-

The process to create a snapshot of the vmware software of previous version is sucessfull.

Name :- Anand cloned

Guest os :- windows 7 (64-bit)

Base memory (RAM) :- 2GB

Storage : 2GB

processors : 2
